1. Complete these user stories:
   - As a vanilla git power-user that has never seen GiggleGit before, I want to be understand the basic differences between GiggleGit and vanilla git, and how to easily apply my existing knowledge of vanilla git to GiggleGit
   - As a team lead onboarding an experienced GiggleGit user, I want to have a clear and easy way to incorporate the new user into our workflow.
2. Create a third user story, one task for this user story, and two associated tickets.
   - As a user brand new to both vanilla git and GiggleGit, I want to have access to clear tutorials to onboard me into what GiggleGit has to offer, and why it is valuable to implement it into my workflow.
   - Task: create an intuitive tutorial for new users
   - Ticket: Design a tutorial for new users
     i. Design and storyboard the workflow for the tutorial. Emphasize the key differences between vanilla git and GiggleGit.
   - Ticket: Implement tutorial to the GiggleGit platform
     i. Implement the designs and storyboards developed in the previous ticket. Make the tutorial accessible when a user first accesses GiggleGit and also have it accessible at a later date. Users can redo the tutorial if they would like. Users can also skip the tutorial.
3. This is not a user story. Why not? What is it?
   - As a user I want to be able to authenticate on a new machine
   - It is a requirement, not a user story. It is lacking reason to why this feature would be helpful.
